

Control system for petrol stations with usage of OPT (Outdoor Payment Terminal)

Advantages:

- Possibility to provide control over any fuel dispenser at petrol station (sales of fuel) from OPT and from a POS system.
- At night time (or in daily breaks) OPT can work autonomously without a POS system (economy of expenditures on service personnel).
- Remote data gathering and analysis in company office separately from POS system and from OPT.
- Application of PTS controller over fuel dispensers and ATG systems allows control over a big number of various fuel dispensers and ATG systems using proprietary communication protocols.
- Using of NaftaPOS software for petrol stations allows vast possibilities in automation of petrol stations and storage depots.
