PURPOSE OF THE DOCUMENT

This Technical Guide is intended for studying of WFC wireless forecourt communicator for petrol stations. It contains basic information regarding its

- technical characteristics
- board interfaces and connectors
- configuration
- schemes of connection to various fuel dispensers, ATG systems, price-boards and readers

Information regarding connection to specific forecourt equipment (fuel dispensers, ATG systems, price-boards and readers) and correspondent configuration of WFC communicator can be received upon request to Technotrade LLC company.

Due to a reason that the WFC communicator's firmware is constantly being developed in direction of improvement of its possibilities, changes are possible in final version, which are not described in given Technical Guide.

During the system development process given Technical Guide is also expanded and updated and new chapters are added. The latest version of this Technical Guide can be downloaded from the WFC communicator web-page: https://www.technotrade.ua/wireless-forecourt-communicator.

Technotrade LLC hereby permits reproduction of this document as may be required by any of the customers or OEMs wishing to use it.

This document has been carefully prepared and is believed to be accurate. However, Technotrade LLC, its employees and its agents do not assume responsibility for its use either directly or indirectly. Technotrade LLC shall not be liable for technical or editorial errors or omissions which may appear in this document. Technotrade LLC reserves a right to make changes to this document at any time without notice. Prospective users of this document should contact Technotrade LLC at the time they wish to use WFC communicator together with their products to become aware of any updates that may apply.

In case if you find any mistakes, omissions in this document or have any suggestions on improvements to this document, please feel free to e-mail them to our support mailbox: support@technotrade.ua. We will be grateful to you for this valuable information.

All technical questions regarding the WFC communicator are welcome to be asked on support mailbox: support@technotrade.ua. Our support team will be glad to help you.

Also, you can call to us or visit us on:

Technotrade LLC

Ukraine, 04082 Kiev, Priorska str. 10, office 1 Tel: +38 044 502 46 55, +38 044 502 46 77

www.technotrade.ua page 6 from 97

APPOINTMENT

WFC wireless forecourt communicator allows communication with any brand of dispensers (fuel, LPG, CNG), tank probes and consoles, price poles in a wireless way without a need to put any cables.

WFC has a rich set of electric interfaces on board (various types of current loop interfaces, voltage driven interfaces, RS-485, RS-422, RS-232) suiting to connection of any dispenser brand. WFC has auxiliary ports for connection of RFID readers installed on dispensers.

Communication with WFC is done over a secured Wi-Fi network.

The WFC communicator works in conjunction with the <u>PTS-2 forecourt controller</u>, where the WFC communicator provides wireless communication and connection to devices using various hardware interfaces and the PTS-2 controller manages communication with the connected devices (dispensers, ATG consoles and probes, price poles, readers and AVI systems). Detailed information on the PTS-2 forecourt controller can be found in its technical guide found on https://www.technotrade.ua/View/DownloadFile?fileName=PTS-2-forecourt-controller-technical-guide.pdf.

Wireless communication is done within a secured Wi-Fi network, which is managed by a separate Wi-Fi router.

Besides the wireless communication the WFC communicator is also able to work in a wired mode, in which the WFC serves as a universal interface converter for dispensers able to convert from input RS-232 or RS-485 interfaces in many other output interfaces:

- 2-wire current loop interface
- 3-wire current loop interface
- 4-wire current loop interface
- 2-wire voltage driven interface

Dimensions of the WFC communicator board are extremely small with a size of a credit card, which makes its suitable for installation inside any third-party hardware.

www.technotrade.ua page 7 from 97

TECHNICAL CHARACTERISTICS

General specification

##	PARAMETER	VALUE
1	Power supply voltage	12 V DC
2	Maximal current consumption	1 A max
3	Temperature range	-40°C +60°C
4	Weight	200 g
5	Overall dimensions	85 x 58 x 30 mm

WFC communicator is using ESP32-WROOM-32UE-N4 MCU inside. Information on its technical characteristics, certificates and permissions are given in its technical guide, which is available for download from the following link: <a href="https://espressif.com/documentation/esp32-wroom-32e esp32-wroom-32e e

<u>www.technotrade.ua</u> page 8 from 97

COMMUNIATION PORTS

PORT NAME		INTERFACE TYPE	APPOINTMENT
	GB	2-wire current loop interface	Connection of dispensers using 2-wire current loop interface, for example 2A, AG Walker, ANGI International, Baransay, Batchen, Bennett, CFT Clean Fuel, Compac, EuroPump, Falcon, Fuelsis, Galileo, Gilbarco, Greenfield, Kalvacha, Kraus, Maser, Meksan, Mekser, PEC (Gallagher Fuel Systems), Petposan, Petrotec, Prowalco, Pump Control, Salzkotten, Tankanlagen Salzkotten, Wayne Dresser (USCL communication protocol), Wertco, Yenen, others
	тн	3-wire current loop interface	Connection to dispensers using 3-wire current loop interface, for example Tokheim, Satam, Emgaz Dragon, Kalvacha, Kraus, others
	LP	3-wire current loop interface	Connection to dispensers using 3-wire current loop interface, for example Logitron, Emgaz Dragon, Gilbarco Marconi, Fornovo LPG, Vanzetti, others
XTS	НҮ	4-wire current loop interface	Connection to dispensers using 4-wire current loop interface, for example HongYang, Star, others
MAIN PORTS	NZ	2-wire voltage driven interface	Connection to dispensers using 2-wire voltage driven interface, for example Actronic, Agira, Batchen, Compac, Intermech, PEC (Gallagher Fuel Systems), others
MM	RS-485	RS-485 interface (2 wires: line A, line B)	Connection to dispensers and register meters using RS-485 interface, for example 2A, Adast, Astron, Bailong, BlueSky, Censtar, Changlong, Coptron, Coritec, Datian Machines, DEM G. Spyrides, Develco, DINT, DongHwa Prime, Durulsan, Eaglestar, Ecotec, EKOSIS, EPCO, EuroPump, Fuelsis, Furen HighTech, Hitaci, IPT, Korea EnE, Kwangshin, Lanfeng, Liquid Controls, Meksan, Mepsan, Midco, Mithra Fueling, MM Petro, MRT, MsGas, Neotec, ORCA, PetroMeccanica, RealTech, Safe, Sanki, Shelf, Shibata, Tatsuno, Tattan, Tiger, Tokico, Tominaga, TrueTech, Wayne Dresser, Welldone, Zcheng, others. Connection of price poles, readers and AVI systems.
	RS-232	RS-232 interface (3 wires: TxD, RxD, Gnd)	Connection to dispensers and register meters using RS-232 interface interface, for example Gilbarco EMR, Lanfeng, Total Control Systems, others. Connection of price poles, readers and AVI systems.
LIARY	RS-485	RS-485 interface (2 wires: line A, line B)	Connection of readers installed on dispensers Wired connection to WFC communicator from the
AUXILIARY	RS-232	RS-232 interface (3 wires: TxD, RxD, Gnd)	management system

NOTE! It is strictly prohibited to connect any of the cables' shields to ports of WFC communicator.

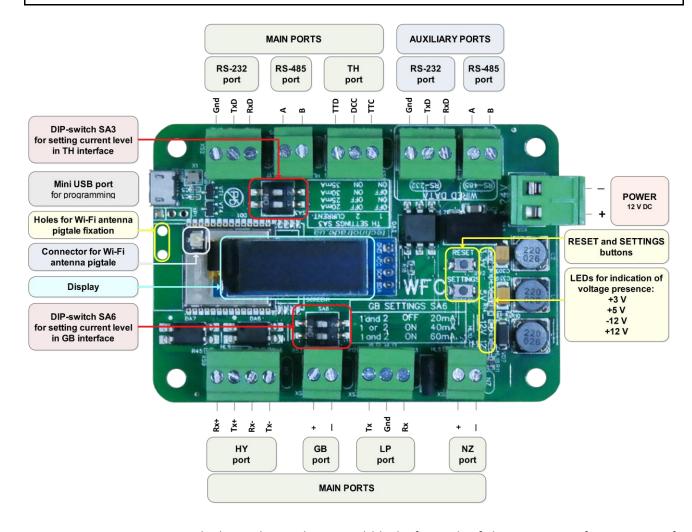

Manufacturer reserves a right to bring in modifications in construction of controller for improving of its technical and functional characteristics, so supplied version of controller may differ from described in given technical guide.

WARNING! This is a class A product. In a domestic environment this product may cause radio interference in which case the user may be required to take adequate measures.

<u>www.technotrade.ua</u> page 9 from 97

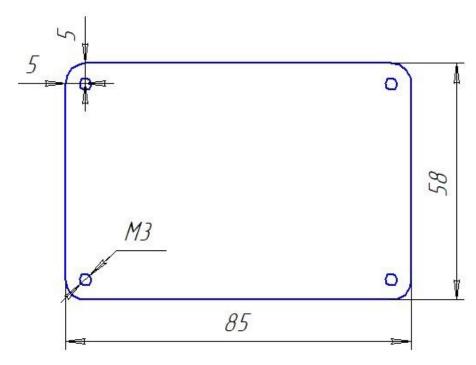

Revision: R02

BOARD CONNECTORS, INTERFACES AND DIMENSIONS

WFC communicator is supplied together with terminal blocks for each of the connectors for screwing of connection wires. Also, the complete set contains an external antenna and a pigtale connector for antenna connection.

Overall dimensions of the WFC communicator board:

www.technotrade.ua page 10 from 97

WFC communicator has 2 buttons:

1. **SETTINGS button** has 2 appointments:

- If you click it shortly during operation then you can scroll between different "screens" on the display showing information on the present operation of the WFC:
 - presently used Wi-Fi network, assigned IP-address, network mask and gateway
 - network MAC address
 - serial number of WFC
 - used Wi-Fi channel
 - Wi-Fi signal level
 - used mode of WFC operation
 - used port number for communication
 - counters of packets exchange on main ports and auxiliary ports (number of packets received and transmitted)
 - presently used firmware version
 - information on manufacture (Technotrade LLC company)
- If you constantly press the SETTNGS button for more than 10 seconds then it will lead to erase of present settings in WFC and restoring to factory default values
- 2. RESET button, clicking on it leads to restart of the WFC operation

Display of WFC is used to display all information on the WFC operation, which is grouped to a number of "screens", switching between which is done by clicking the SETTINGS button. Information is shown on the display during 5 seconds after clicking the SETTINGS button, after that the display is turned off, so in order to show it

DIP-switch SA6 is used for selection of the current level in GB interface due to different brands of dispensers might require different current level in the 2-wire current loop interface. Possible values of the current level depending on the SA6 DIP-switch positions are the following:

- DIP-1 switch OFF and DIP-2 switch OFF 20 mA
- DIP-1 switch ON and DIP-2 switch OFF 40 mA
- DIP-1 switch OFF and DIP-2 switch ON 40 mA
- DIP-1 switch ON and DIP-2 switch ON 60 mA

DIP-switch SA3 is used for selection of the current level in TH interface due to different brands of dispensers might require different current level in the 3-wire current loop interface. Possible values of the current level depending on the SA3 DIP-switch positions are the following:

- DIP-1 switch OFF and DIP-2 switch OFF 20 mA
- DIP-1 switch ON and DIP-2 switch OFF 25 mA
- DIP-1 switch OFF and DIP-2 switch ON 30 mA
- DIP-1 switch ON and DIP-2 switch ON 35 mA

<u>www.technotrade.ua</u> page 11 from 97

Review date: 11 December, 2023

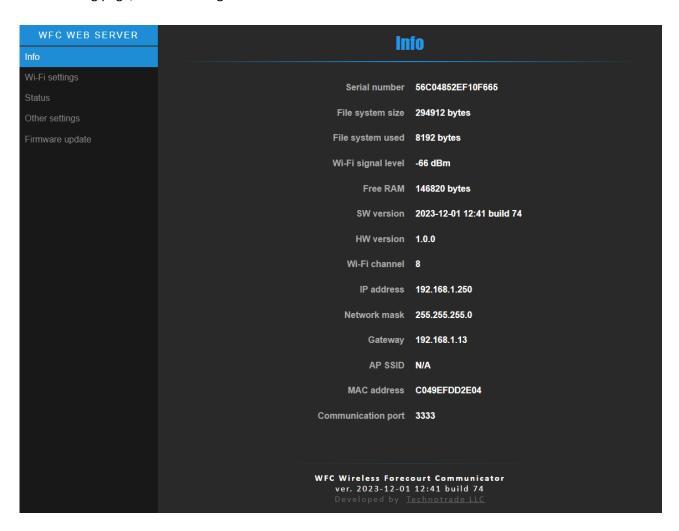

STARTUP AND CONNECTION

Revision: R02

When the WFC communicator starts after the power supply is provided then it loads the configuration it already has and tries to connect to the Wi-Fi network configured in it. WFC communicator can be configured to use a static IP-address or can be configured to use DHCP (meaning it is automatically assigned a free IP-address present within the connected Wi-Fi network by the router). The applied IP-address is possible to check on the display of the WFC by clicking once the SETTINGS button on its board or in the web server of the WFC communicator.

In case if there is a need to reconfigure the WFC and there is no access to preconfigured network – then it is possible to reset the WFC to factory settings by clicking and holding the SETTINGS button for at least 10 seconds during its operation. After restoring the WFC will create its own Wi-Fi network with the name "WFC server XXXX" (where XXXX are last 4 digits of the MAC-address of WFC), default password to this network is 12345678, so it is possible to connect to this network, access the web-server of the WFC communicator and reconfigure it to the needed Wi-Fi network.

For initial configuration of the WFC communicator you need to connect to the network created by the WFC communicator. After that access to the WFC web server for its configuration can be done in any modern web-browser. After entering the IP-address of the WFC communicator in the web browser the user will see the following page, which shows general information on the WFC communicator:

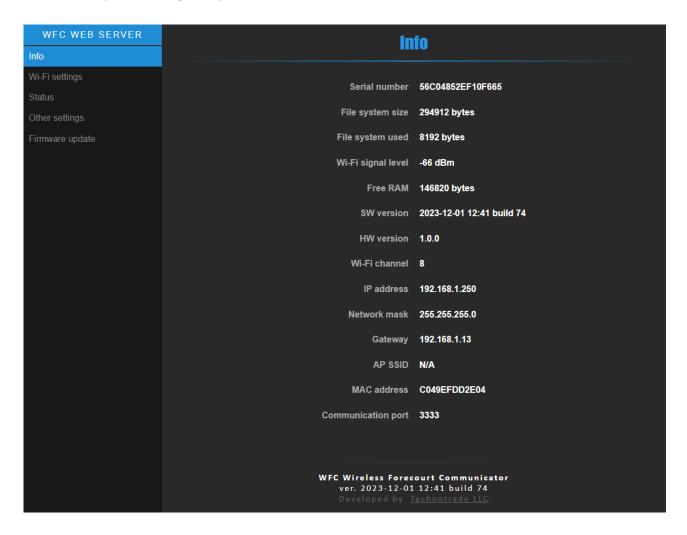

<u>www.technotrade.ua</u> page 12 from 97

CONFIGURATION WEB SERVER

Info page

Info page shows general information on the WFC communicator including its:

- presently used Wi-Fi network, assigned IP-address, network mask and gateway
- network MAC address
- serial number of WFC
- used Wi-Fi channel
- Wi-Fi signal level
- used mode of WFC operation
- used port number for communication
- software and firmware versions of WFC
- other system settings and present values

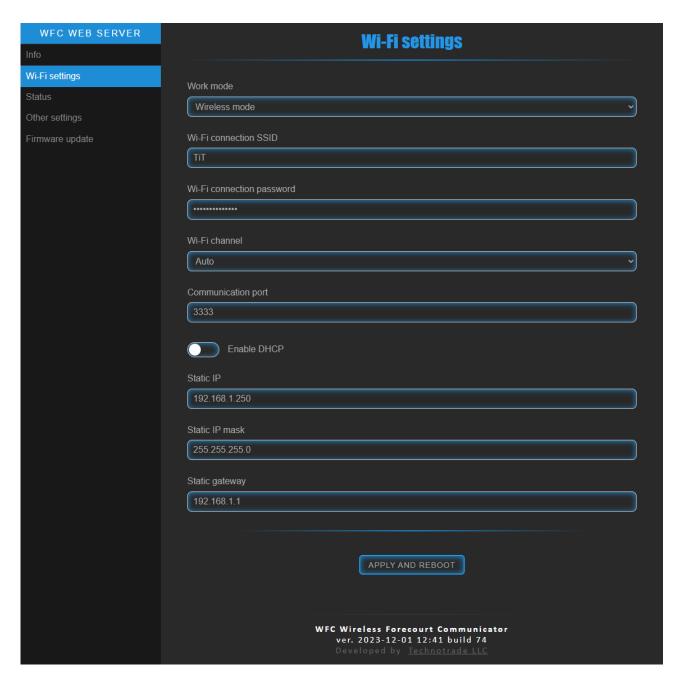

www.technotrade.ua page 13 from 97

Wi-Fi settings page

Wi-Fi settings page is used for setting of main configuration of the WFC operation:

- used mode of operation there are 3 main modes of the WFC communicator operation:
 - wireless mode communication with the PTS-2 controller is done in a wireless way over Wi-Fi network
 - wired mode communication with the PTS-2 controller is done in a wired way over RS-485 or RS-232 interfaces
- Wi-Fi network credentials for connection
- Wi-Fi channel to use
- port to use for communication with the PTS-2 controller
- settings for static IP-address or selection of automatic IP-address assigning using DHCP

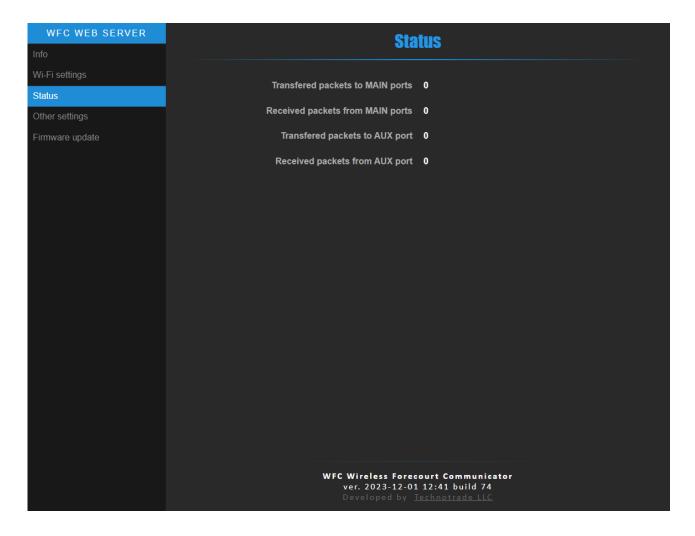

www.technotrade.ua page 14 from 97

Status page

Revision: R02

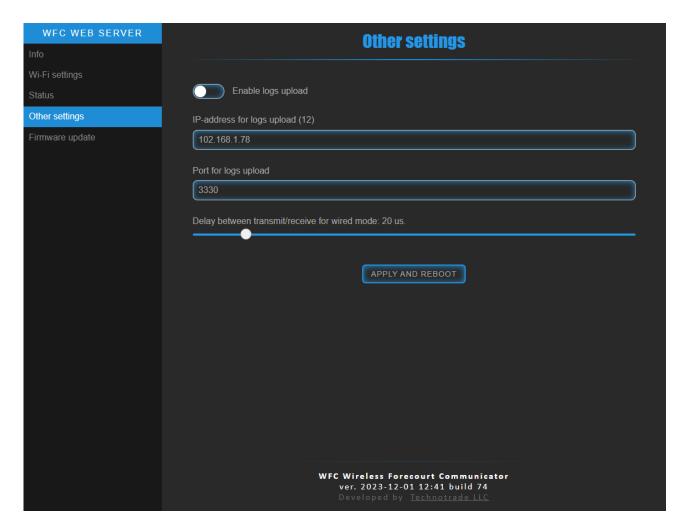

Status page is used to review statistics on exchanged packets to main and auxiliary ports.

<u>www.technotrade.ua</u> page 15 from 97

Other settings page

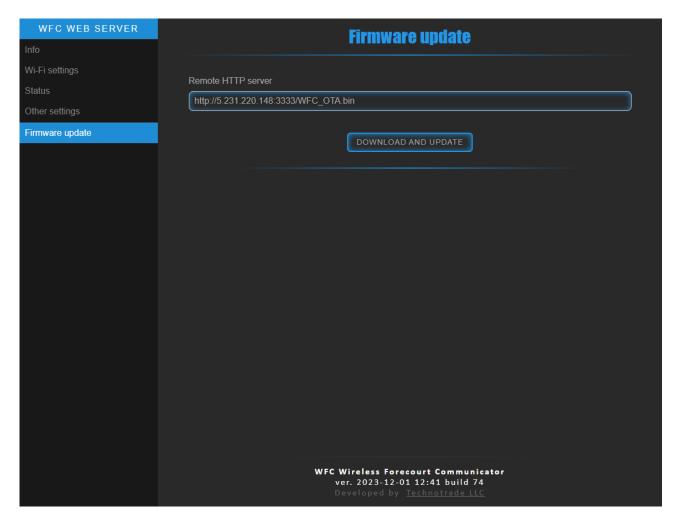

Other settings page is used for setting the logs upload.

<u>www.technotrade.ua</u> page 16 from 97

Firmware update page

Firmware update page is used for setting the IP-address for download and installing a new firmware for WFC communicator.

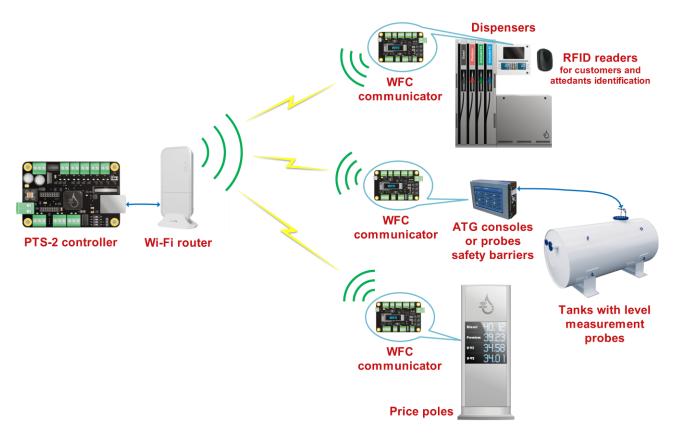

Note! Address http://5.231.220.148:3333/WFC_OTA.bin is a universal address for upload of the WFC communicator firmware. This is a special address, where Technotrade LLC stores the latest firmware for the WFC communicator.

www.technotrade.ua page 17 from 97

COMMUNICATION TO PTS-2 CONTROLLER

Wireless communication

In order to use wireless communication between the PTS-2 controller and the WFC communicators the first thing you need to do is to unite both the PTS-2 controller and the WFC communicators to use the same network, which is established by a separate secured Wi-Fi router.

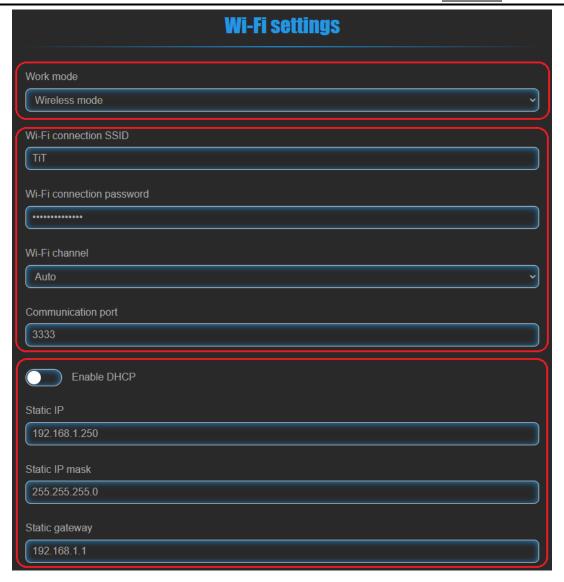

At this you can locate a separate WFC communicator for each of the forecourt devices you need to communicate with. Or you can unite several such devices to use the same single WFC communicator if the used communication interface allows it, for example if these devices are using the RS-485 interface and the same communication protocol.

Note! Operation of the WFC in the wireless mode depends on the Wi-Fi router. Any interruption of the Wi-Fi router operation will lead to absence of communication between the PTS-2 controller and the connected equipment (pumps, readers, others), which could potentially lead to any possible problems. Owners of WFC should provide uninterruptible operation of the Wi-Fi router and prevent unauthorize access to its by any unauthorized personnel. Manufacture does not bear any responsibility for the Wi-Fi router or network operation or problem, which can arise out of it.

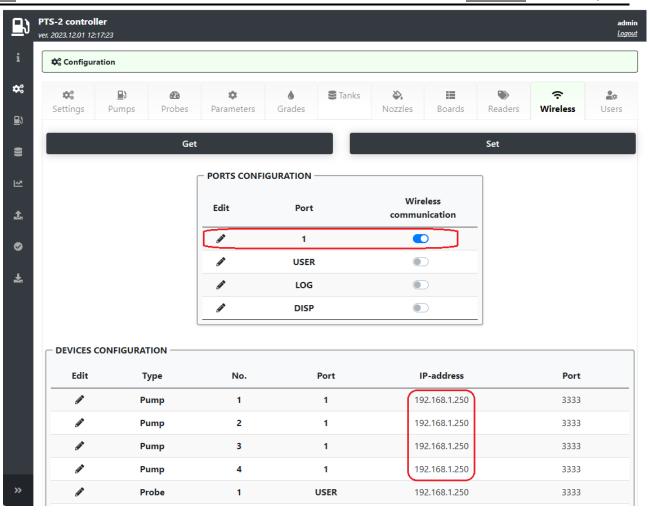

After this you need to configure each WFC communicator to use *Wireless* mode of operation and to use the same Wi-Fi network established by the applied Wi-Fi router. These configurations are done on the *Wi-Fi* settings page in WFC communicator web server:

www.technotrade.ua page 18 from 97

The PTS-2 controller has to be also connected to the same Wi-Fi router in a wired way (Ethernet port) and configured on the *Configuration* page > *Wireless* tab, where you should configure which of the ports has to work in a wireless way and to set the IP-address and port for each of the WFC communicators working on these ports, configuration of the PTS-2 controller is explained in its technical guide found on https://www.technotrade.ua/View/DownloadFile?fileName=PTS-2-forecourt-controller-technical-guide.pdf:

www.technotrade.ua page 19 from 97

<u>www.technotrade.ua</u> page 20 from 97

Review date: 11 December, 2023

Wired communication

Revision: R02

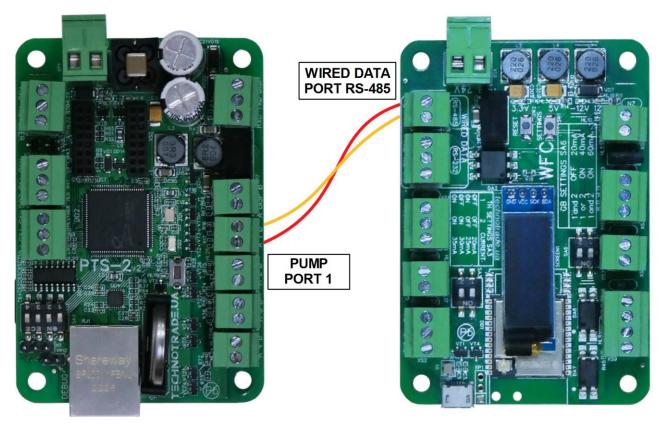

At wired communication the PTS-2 controller can connect directly to the WFC, the WFC in this mode serves as a universal interface converter able to convert from input RS-232 or RS-485 interfaces to many other output interfaces:

- 2-wire current loop interface
- 3-wire current loop interface
- 4-wire current loop interface
- 2-wire voltage driven interface

In configuration of the WFC communicator you need to set the Wired operation mode:

Connection of the PTS-2 controller to the WFC communicator is done in a wired way using RS-485 interface:

PTS-2 controller

WFC communicator

Configuration of the PTS-2 controller is explained in its technical guide found on https://www.technotrade.ua/View/DownloadFile?fileName=PTS-2-forecourt-controller-technical-guide.pdf.

www.technotrade.ua page 21 from 97

Revision: R02

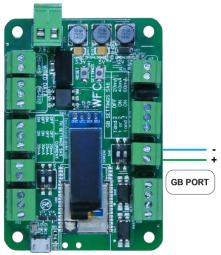

EXAMPLES OF CONNECTION TO FUEL DISPENSERS

Below section shows examples of connection to various brands of fuel dispensers. This information is provided as an example. For obtaining of detailed information on connection to various brands of fuel dispensers, configuration of the fuel dispensers and configuration of PTS-2 controller please refer to our support page https://www.technotrade.ua/support. List of supported brands of dispensers is provides on the following link: https://www.technotrade.ua/pts2-forecourt-controller.html#Supported-pumps-and-register-meters-communication-protocols.

In some cases, various models of same brand of fuel dispensers may have different interfaces depending mainboard type and type of interface boards use inside the dispenser. In such case the best way to check how your fuel dispenser is to be connected is to take its mainboard photos and send to us on our support mailbox support@technotrade.ua. Mainboard is normally located inside the fuel dispenser pumphead behind the displays.

EXAMPLES OF CONNECTION TO ATG SYSTEMS

Below sections show examples of connection to various brands of probes and ATG systems. This information is provided as an example. For obtaining of detailed information on connection to various brands of ATG systems and probe, their configuration and configuration of PTS-2 controller please refer to our support page https://www.technotrade.ua/support.

Gilbarco Veeder Root TLS consoles connection scheme

Connection to Gilbarco Veeder Root TLS system is made to RS-232 port:

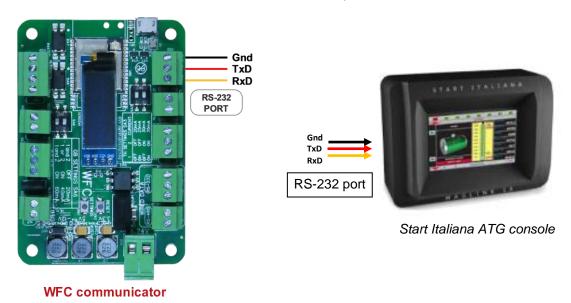

WFC communicator

Gilbarco Veeder Root TLS ATG console

Start Italiana console connection scheme

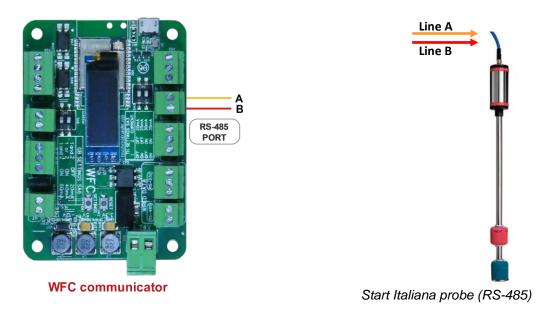

Connection to Start Italiana console is made to RS-232 port:

page 87 from 97 www.technotrade.ua

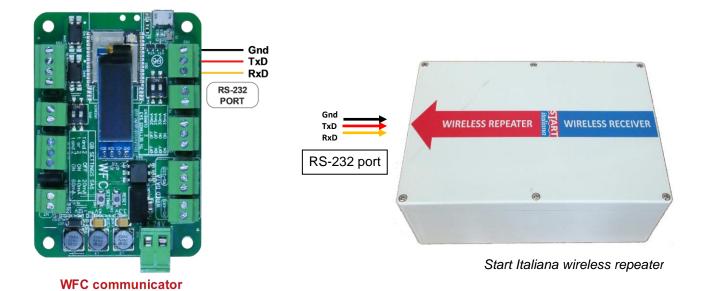

Start Italiana wired probes connection scheme

Connection to Start Italiana wired probes is to RS-485 port (connection is made through an intrinsic safety barrier):

Start Italiana wireless probes connection scheme

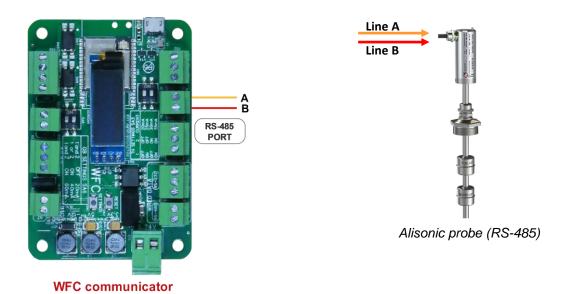

Connection to Start Italiana wireless probes is to RS-232 port:

<u>www.technotrade.ua</u> page 88 from 97

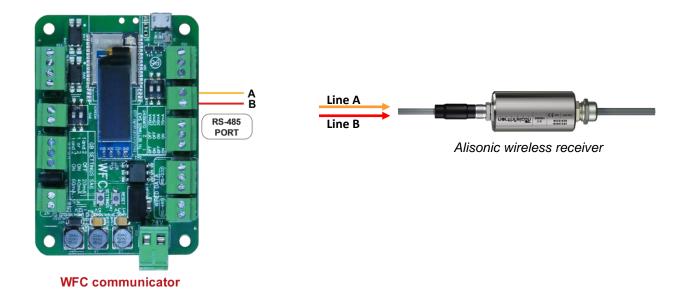

Alisonic wired probes connection scheme

Connection to Alisonic wired probes is made to RS-485 port (connection is made through an intrinsic safety barrier):

Alisonic wireless probes connection scheme

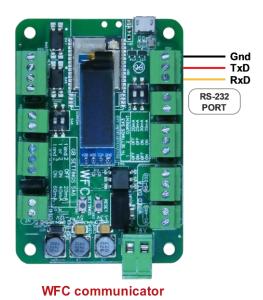

Connection to Alisonic wireless probes is made through Alisonic wireless receiver to RS-485 port:

<u>www.technotrade.ua</u> page 89 from 97

Struna ATG system connection scheme

Connection to Struna system is made to RS-232 port:

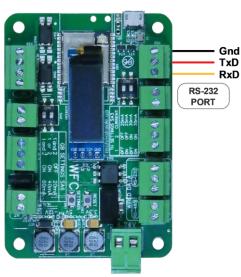

Struna ATG calculation unit

OPW Site Sentinel ATG system connection scheme

Connection to OPW system is made to RS-232 port:

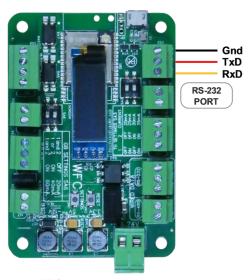

OPW ATG console

<u>www.technotrade.ua</u> page 90 from 97

Colibri ATG system connection scheme

Connection to Colibri system is made to RS-232 port:

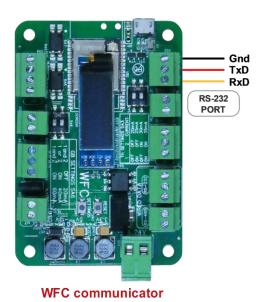

WFC communicator

Fafnir ATG system connection scheme

Connection to FAFNIR system is made to RS-232 port:

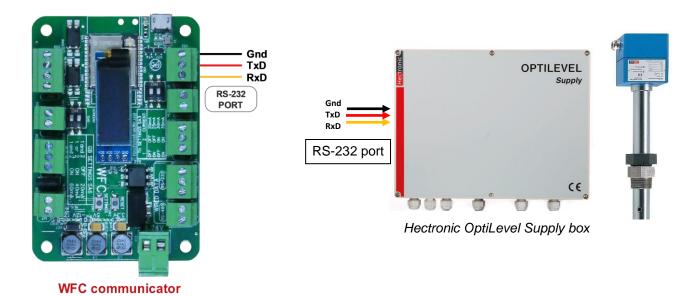

FAFNIR-Command ATG console

<u>www.technotrade.ua</u> page 91 from 97

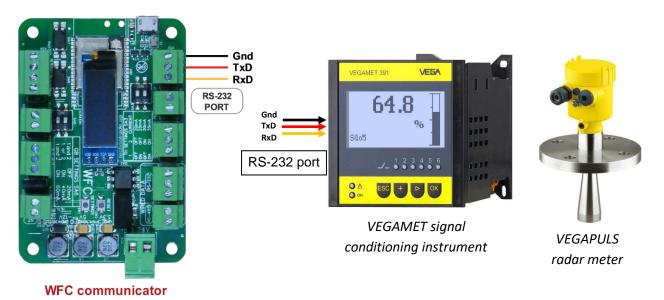

Hectronic ATG probes connection scheme

Connection to Hectronic probes is to RS-232 port to Hectronic OptiLevel Supply box.

Vega radar level meters

Connection to VEGA meters is to RS-232 port through a VEGAMET box.

EXAMPLES OF CONNECTION TO READERS AND AVI SYSTEMS

Below sections show examples of connection to various brands of readers and AVI (automatic vehicles identification) systems. This information is provided as an example. For obtaining of detailed information on connection to various brands of readers and AVI systems, their configuration and configuration of PTS-2 controller please refer to our support page https://www.technotrade.ua/support.

VRD-485 RFID readers connection scheme

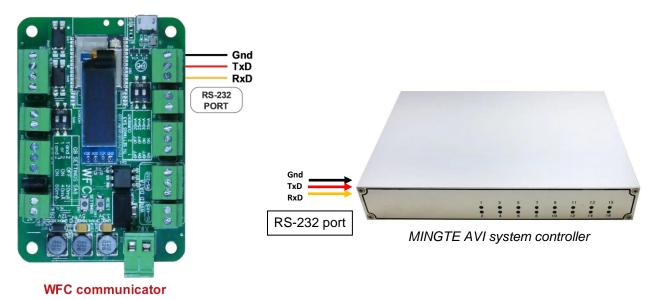

Connection to VRD-485 RFID readers installed on dispensers is made to auxiliary RS-485 port:

WFC communicator

MINGTE AVI system controller connection scheme

Connection to MINGTE AVI system controller is made to RS-232 port:

www.technotrade.ua page 96 from 97

Revision: R02 Review date: 11 December, 2023

ORDER INFORMATION

Depending on the order code the WFC communicator can be supplied either in a view of electrical board (variant of controller supply *WFC-PCB-001*), or installed in a mounting box with cables inputs and a power switching button (variant of controller supply *WFC-BOX-001*). An external antenna and a pigtale connector for antenna are included in a package.

Variant of controller supply in a view of electrical board (WFC-PCB-001)

Variant of WFC communicator supply installed in a metal box with cables inputs and a power switching button (variant of controller supply WFC-BOX-001)
